

A FEW THINGS TO EXPECT...

Within a couple of days of the sale, a customer service representative will come out and retest the water to make sure the system is performing properly. They will bring the warranty documents plus the starter soap kit (if applicable), and ask you to either make final payment or to sign the final forms for the finance company, where applicable.

A CALL FROM THE BANK- Then, the finance company will call you to confirm that you received your water treatment system, that it is functioning, that you understand the financing plan, and that you will pay for it. They will call from an 800# and the caller ID will typically either be ISPC Finance or Aqua Finance.

FINANCE NOTE- The bank/finance companies are ONLY financing the water treatment equipment. Any promotional gifts (like the soaps or cookware, for example) will be ordered AFTER the funds clear our bank account. Generally, it takes 2 to 4 weeks before you receive promotional items.

During that visit, he or she will also arrange your membership and points for GoHealthy360 by Liquid Soap Products OR your first soap order from Pure & Gentle (whichever is applicable) and give you the redemption forms for your future shipments plus a starter kit if your sales rep didn't already leave one.

PROMOTIONAL SOAP PACKAGES- It is YOUR responsibility to hold on to all soap package related documents and to initiate future shipments. These packages are prepaid on your behalf. As such, please contact Pure & Gentle OR Liquid Soap Products directly for ALL future questions, concerns, or customer service inquiries related to their products and their program.

PROMOTIONAL COOKWARE- This cookware is precision engineered and, for many cooking applications, does NOT operate the same as traditional cookware. It is YOUR responsibility to clean the oils off the cookware before using it the first time, learn how to properly cook with these utensils, and register the warranty directly with the manufacturer.

ADJUSTING TO SOFTENED WATER- It will take a couple of weeks for your body to adjust to the different feel of soft water. Once you get used to it, water that isn't treated will likely start to feel icky to you, just like you felt the difference during the hand wash test. The water does actually become SLICKER so 1) be careful. 2) consider investing in mats that create friction in the bottom of your tubs and showers.

Remember, soaps lather A LOT better in conditioned water. You have gotten in the habit of using large squirts of shampoo, body soap, sink soap, laundry soap, etc. STOP doing that. Experiment with smaller quantities until you figure out how much you need. Then force yourself to get in the HABIT of only using what you need. It's EASY to waste soap when using conditioned water.

SERVICE CALLS- There is a \$75 trip fee (waived first 12 months). However, most issues can be resolved by phone at no cost with some guided troubleshooting.

SALT- Use evaporated salt CRYSTALS (Solar is BEST!) and NOT pellets, although either will work. The crystals come in large 40 lb. bags that cost \$6 to \$7 each and can usually be found at Lowe's, and Home Depot. They are usually INSIDE near the plumbing department. Most Greater Charlotte area households will only need 3 - 8 bags per yr.

MEDIA REPLACEMENT- The lifetime warranty covers you media itself but you are responsible for the shipping, handling, and service on system rebeds. Depending on YOUR usage, you will need to "rebed" the media inside the tank approximately every 4 - 8 years,

51 REASONS TO CHOOSE PURESAFE AWS + 100% All-Natural Soap Products

Save \$\$\$	No Bath Tub Ring	Washing Machines Last Longer
Saves Scrubbing Time	Helps Skin Complexion	Dishwashers Last Longer
